Summary

Research and development activities of innovative technology of intelligent cultivation line:

The aim of the project is, through research and development activities in the company REVOL TT Consulting s.r.o., to implement a construction of a prototype of an intelligent cultivation line for continuous cultivation of effective microorganisms with a complex technological solution for the production of continuous mixtures of effective microorganisms adapted to the soil type, cultivated crop, ecological conditions of a specific place of usage to achieve increased value creation and sustainable growth.

The output of the project represents a fundamental technological innovation for both technological producers of disposable cultivation devices and producers of biological fertilizers based on effective microorganisms, within the EÚ and the rest of the world.
