Summary

The RelmaGIne project aims to establish and integrate research-led teaching in landscape architecture education. Its goal is to establish an interactive Living Lab on green innovations in landscape architecture, such as a green roof, vertical vegetation constructions and stormwater retention features. In this Living Lab, we want to implement research-led teaching and generate new learning models, including e.g. co-design and evidence-based design of green innovations.

The Slovak partner of the project is the AGRGI. It will contribute with empirical knowledge and verified practical experiences, skills and competences linked to green innovations.

The Norwegian partner of the project is the HGUT, which will contribute with expert knowledge in environmental and sustainability studies, including community empowerment and citizen science.

RelmaGIne project will strongly enhance and innovate landscape architecture in Slovakia. The project will be promoted by PR and dissemination activities.
